

SUDHAKARARAO SAJJA

Application Architect | DevOps & Cloud Platform Engineering | AWS · GCP · Azure · Kubernetes

Toronto, Canada • +1 4168218246 • sajja.sudhakar Rao@gmail.com • [linkedin.com/in/sajjasudhakar Rao](https://www.linkedin.com/in/sajjasudhakar Rao) • autoshiftops.com
Work Authorization: Valid Canadian Employer-Specific Work Permit (Tech Mahindra). Fully eligible for employer-sponsored work permit transfer.

Professional Summary

Application Architect and Senior DevOps Engineer with 13+ years of experience designing and operating enterprise-scale cloud-native platforms across AWS, GCP, and Azure. I specialize in cloud architecture, Kubernetes orchestration, CI/CD automation, and zero-trust security design for enterprise workloads.

I have led migrations of 50+ legacy applications to GCP Cloud Run, built production-grade GKE clusters, standardized Terraform modules across 200+ resources, and delivered 40–60% improvements in deployment speed, reliability, and cloud cost efficiency. Experienced in AI/ML infrastructure using Vertex AI, observability platform design, and identity-focused security architecture including IAM, OAuth 2.0, OIDC, and secrets management.

Currently based in Mississauga, Ontario on a valid Canadian work permit — fully eligible for employer-sponsored work permit transfer. Open to Application Architect, DevOps, SRE, and Platform Engineering roles across Canada.

Technical Skills

- Cloud:** AWS (EC2, S3, CloudWatch), GCP (GKE, Cloud Run, Vertex AI), Azure (AKS)
- Containers:** Docker, Kubernetes (HA clusters, autoscaling)
- IaC:** Terraform (modules, multi-account), Ansible
- CI/CD:** GitHub Actions, Cloud Build, Jenkins
- Identity & Security:** IAM (custom roles), OAuth 2.0, OIDC, SAML 2.0, Zero-Trust Architecture, WAF, Cloud Armor, VPC Service Controls, Secrets Management (Vault/GCP), mTLS
- Observability:** Prometheus, Grafana, ELK, Cloud Monitoring
- Programming:** Python, Bash, SQL

Experience

Tech Mahindra Toronto, Canada	Jun 2021 – Present
Application Architect Toronto, Canada	July 2024 - Present
- Defined end-to-end cloud architecture standards and governance frameworks across multi-cloud environments (AWS, GCP), establishing scalability patterns, deployment blueprints, and security baselines adopted across delivery teams. - Architected identity and access management strategy including IAM custom roles, service account governance, and zero-trust network policies — reducing privilege escalation risks and misconfigurations by 50%. - Designed secure GCP infrastructure for GenAI workloads using Vertex AI and Cloud Run, enabling scalable AI/ML platform delivery. - Contributed to infrastructure planning and deployment patterns for AI/ML and Generative AI workloads, focusing on scalability, security, and cost efficiency. - Reduced GCP compute and storage costs by 25% through rightsizing, autoscaling, and Cloud Run migration strategies. - Automated enterprise patching and deployment workflows for clients including Verizon, reducing manual operational effort by 50% and ensuring compliance with security policies. - Advised development and QA teams on cloud-native architecture and deployment strategies, improving platform adoption and cost efficiency.	

Tech Lead | Hyderabad, India**Apr 2024 – Jul 2024**

- Led cross-functional DevOps team in delivering cloud infrastructure migrations and CI/CD pipeline standardization across AWS and GCP environments.
- Mentored senior and junior engineers on Terraform and Kubernetes best practices, improving delivery consistency and reducing environment provisioning time.

Senior DevOps Engineer | Toronto, Canada**Aug 2022 – Apr 2024**

- Architected and executed migration of 50+ legacy monoliths to GCP Cloud Run, eliminating server management overhead and enabling 40% faster feature delivery.
- Standardized 200+ cloud resources across AWS and GCP using reusable Terraform modules — accelerating environment provisioning by 60% and improving governance consistency.
- Built and maintained CI/CD pipelines using GitHub Actions and Cloud Build for hybrid AWS/GCP workloads, reducing release cycles by 40% and improving deployment reliability.
- Implemented cloud security architecture including WAF, Cloud Armor, and VPC Service Controls — reducing security incidents and misconfigurations by 50%.
- Established centralized observability across Prometheus, Grafana, ELK, and Cloud Monitoring — improving incident detection and MTTR by 35%.

Tech Lead | Hyderabad, India**Jun 2021 – Aug 2022**

- Designed and operated production-grade GKE platforms using Terraform, supporting multi-environment deployments with autoscaling and high availability.
- Led DevOps delivery for enterprise clients including Verizon, automating patching and deployment workflows — reducing manual operational effort by 50%.

Digital Onus | Hyderabad, India**Jan 2020 – Jun 2021****DevOps Engineer**

- Built and deployed containerized microservices using Python, Flask, and FastAPI, supporting SQL-backed REST APIs for enterprise clients including EY, QVC Japan, Temenos, and PMI.
- Designed and implemented Jenkins and Cloud Build pipelines with parallel testing stages, reducing end-to-end release time from approximately 4 hours to less than 1 hour.
- Developed Infrastructure as Code proof-of-concepts on AKS and GKE, supporting early cloud adoption and containerization of legacy services.
- Automated cross-cloud data synchronization between AWS S3 and Google Cloud Storage using Python, reducing data transfer latency by 20%.

MobileIron | Hyderabad, India**Aug 2017 – Jan 2020****Software Development Engineer in Test (SDET)**

- Validated enterprise Identity and Access Management platforms including mobile threat defense, zero sign-on (ZSO), and device management — directly testing authentication flows across OAuth, SAML, and certificate-based identity systems for global enterprise clients.
- Deployed Kong API Gateway on Kubernetes for integration testing of identity and access control APIs, validating token issuance, session management, and policy enforcement.
- Built Docker and Kubernetes-based test environments simulating zero-trust network access scenarios across on-premises and cloud infrastructure.

Broadcom — (via Millennium Technosoft) | Hyderabad, India**Jun 2013 – Aug 2017****Software Engineer II**

- Validated enterprise network protocols — routing, switching, multicast, and security — on Broadcom silicon including Tomahawk and Dune chipset families used in data centre and service-provider switching platforms.
- Developed Python and shell-based automation frameworks for chipset-level network protocol and system testing.
- Worked with SDN technologies (NETCONF, RESTCONF, and OpenFlow) and configuration management tools (Chef, Puppet).

Certifications

- GCP Generative AI Leader (2026)
- GCP Professional Architect (2025)
- AWS Certified Solutions Architect – Associate (2025)
- GCP Associate Cloud Engineer (2025)

Education

Bachelor of Technology in Computer Science | Apr 2007 – Apr 2011

Jawaharlal Nehru Technological University – Kakinada, India
