

SAJJA SUDHAKARARAO

Senior DevOps Engineer | Kubernetes, Terraform, CI/CD | AWS & GCP

Toronto, Canada • +1 4168218246 • sajja.sudhakararao@gmail.com • linkedin.com/in/sajjasudhakararao • autoshiftops.com

Professional Summary

Senior DevOps Engineer with 6+ years of hands-on DevOps and platform engineering experience, and 12+ years in IT overall. Proven expertise in building, automating, and operating scalable cloud-native platforms on AWS and Google Cloud. Strong background in Kubernetes, Terraform-based infrastructure standardization, CI/CD automation, and production reliability. Recent experience includes cloud architecture responsibilities such as platform design, large-scale cloud migrations, security architecture, and cost optimization. Delivered measurable improvements in deployment speed, system reliability, and cloud cost efficiency for enterprise clients including Verizon, EY, QVC, and Temenos. Google Cloud Professional Architect, AWS Solutions Architect, and Google Cloud Engineer certified.

Technical Skills

Cloud Platforms: AWS, Google Cloud (GKE, Compute Engine, Cloud Run, Cloud Monitoring, CloudWatch)

Containers & Orchestration: Docker, Kubernetes (cluster design, autoscaling, multi-environment platforms)

IaC & Automation: Terraform (reusable modules, multi-account/project provisioning), Ansible

CI/CD & Release Engineering: GitHub Actions, Jenkins, Cloud Build, Bitbucket Pipelines; blue-green and canary deployments

Observability & Reliability: SLIs/SLOs, Prometheus, Grafana, ELK Stack, centralized logging, incident response, runbooks

Security & Compliance: IAM least-privilege design, custom roles, WAF, Cloud Armor, VPC Service Controls, secrets management

Programming & Scripting: Python, Bash, SQL; REST APIs; Flask, FastAPI

Experience

Senior DevOps Engineer — Tech Mahindra | Toronto, Canada | Jun 2021 – Present

- Designed and operated production-grade Kubernetes platforms on Google Kubernetes Engine using Terraform as the standard provisioning framework, enabling autoscaling and high availability across multiple environments.
- Architected and executed a modernization strategy to migrate 50+ legacy monoliths to GCP, transforming them into containerized services on Cloud Run to eliminate server management overhead and enable feature velocity.
- Built and maintained CI/CD pipelines using GitHub Actions and Cloud Build for hybrid AWS and GCP workloads, reducing release cycles by 40% and improving deployment reliability.
- Standardized over 200 cloud resources across AWS and GCP through reusable Terraform modules, accelerating environment provisioning by 60% and improving governance consistency.
- Implemented cloud security architecture including IAM custom roles, WAF and Cloud Armor policies, and VPC Service Controls, reducing security incidents and misconfigurations by 50%.
- Established centralized observability across Cloud Monitoring, CloudWatch, Prometheus, and Grafana, improving incident detection and mean time to resolution by 35%.
- Automated enterprise patching and deployment workflows for clients such as Verizon, reducing manual operational effort by 50% and improving compliance.
- Acted as a technical advisor to development and QA teams on cloud-native design, deployment strategies, and cost optimization best practices.

DevOps Engineer — Digital Onus - Hyderabad, India | Jan 2020 – Jun 2021

- Built and deployed containerized microservices using Python, Flask, and FastAPI, supporting SQL-backed REST APIs for enterprise clients including EY, QVC Japan, Temenos, and PMI.

- Designed and implemented Jenkins and Cloud Build pipelines with parallel testing stages, reducing end-to-end release time from approximately 4 hours to under 1 hour.
- Developed Infrastructure as Code proof-of-concepts on AKS and GKE, supporting early cloud adoption and containerization of legacy services.
- Automated cross-cloud data synchronization between AWS S3 and Google Cloud Storage using Python, reducing data transfer latency by 20%.

Software Development Engineer in Test (SDET) — MobileIron - Hyderabad, India | Aug 2017 – Jan 2020

- Led system and integration testing for mobile threat defense, zero sign-on, and device management platforms across on-premises and cloud environments.
- Built internal QA automation tools and a Django-based system QA portal to streamline testing workflows.
- Created Docker- and Kubernetes-based test environments and deployed Kong API Gateway on Kubernetes for integration testing.
- Worked with AWS, Linux, Jenkins, Redis, Cassandra, Kafka, Chef Server, and Git-based CI pipelines.

Software Engineer II — Millennium Technosoft - Hyderabad, India | Jun 2013 – Aug 2017

- Validated enterprise and service-provider networking solutions including routing, switching, multicast, and security protocols.
- Developed Python and shell-based automation frameworks for network and system testing.
- Worked with Linux networking, SDN technologies (NETCONF, RESTCONF, OpenFlow), and configuration management tools including Chef and Puppet.

Certifications

- Google Cloud Professional Architect (2025)
- AWS Solutions Architect – Associate (2025)
- Associate Google Cloud Engineer (2025)

Education

Bachelor of Technology in Computer Science | Apr 2007 – Apr 2011

Jawaharlal Nehru Technological University – Kakinada, India
